

Caring for Lives and Nature

Integrated Pest Management

Pest management has always been among Man's concerns. From the time early *homo sapiens* swatted that first bothersome fly, to the search today for solutions to termite damage, Man has tried to keep a range of pests at arms' length.

In today's world pest control has assumed added significance. With urbanisation gathering momentum the world over, there are a host of new situations facing the pest control specialist. Public health challenges caused by major diseases like malaria, chikungunya, filaria, yellow fever, dengue, leptospirosis and even the plague are directly linked to pests like the mosquito and rat. **Pests are** Destructive or Troublesome living Organisms who are of Nuisance Value to Humans, Health, Property, Pets and Plants. While it may be argued that total extermination of the pests is not practical, *integrated pest management* seeks to contain the threat from these with least environmental damage. Blanket application of powerful insecticides may be very efficient in eliminating pests, but the damage caused to our health and to the ecological system we live in makes this unacceptable. Nature fosters a fine balance between a host of players and it is only through an understanding of this delicate balance that Man can hope to maintain pest-free surroundings.

Pest Management aims to reduce pest problems by carefully selected strategies, chosen after studying and understanding the pests that are to be controlled. **GO GREEN** believes that successful pest management does not look at 'quick fix' remedies but rather seeks to implement well thought of solutions where the ecological as well as economic consequences of the actions have been predicted, as accurately as possible, to be in the best interest of mankind and his environment.

Which is why, **GO GREEN** uses an integrated approach towards pest management. We tackle the pest through carefully laid out and well documented strategies. We use chemicals only when it is absolutely necessary, ensuring they have good safety profile and are extremely efficient. Our approach is to use environmentally sound solutions, often drawing from Nature's own arsenal.

GO GREEN offers experience of 20 years in the industry for Pest Control and Professional Pest Management solutions. Company believes, Integrated Pest Management (IPM) is much success when executed joint venture between client and us to ensure pest free premises.

Mission

To manage pests with minimal usage of Chemicals & Eco friendly products on targeted pests, we ensure to protect environment and safeguard human lives, nature and pets.
